Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 9, 33, 47, 49 and 51 are rejected under 35 U.S.C. 102(b) as being anticipated by Jamal (US Patent # 5,754,537).

Regarding claims 9, 33, 47, 49 and 51, Jamal teaches a remote station (column 10, lines 7-8), comprising: a data buffer for receiving data for transmission (column 10, lines 31-34); a message generator for generating an access request message when the data buffer contains data for transmission (column 11, lines 51-53); a receiver for receiving one or more common grant channels from a base station and for receiving a busy signal from the base station (see Fig. 6); a message decoder for decoding an access grant directed to the remote station, the access grant comprising a common grant on one of the one or more common grant channels (column 14, lines 33-36 the claimed common grant channels are shared channels which are inherent in the access grant); a transmitter for transmitting the access request message and for transmitting a portion of data from the data buffer in response to a decoded access grant in

accordance with the received busy signal (column 11, lines 32-34; column 11, lines 57-63).

Allowable Subject Matter

3. Claims 10-21 and 34-45 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 1-8, 22-32, 46,48 and 50 are allowable.

The following is a statement of reasons for the indication of allowable subject matter: As to claims 1-8, the prior art of record does not teach a scheduler for allocating a portion of the shared resources to zero or more of the requesting remote stations in response to the plurality of access requests, the allocation comprising zero or one common access grant to a subset of the requesting remote stations and for generating a busy signal command in response to the measured utilization. As to claims 22-32, the prior art of record does not teach transmitting a busy signal when the measured utilization exceeds a pre-determined threshold. As to claims 46, 48 and 50, the prior art of record does not teach means for transmitting a busy signal when the measured utilization exceeds a pre-determined threshold. As to claim

Response to Arguments
